Master of Science in Business Information Systems

The Master of Science in Business Information Systems an interdisciplinary program that pulls from the areas of Computer Information Systems, Communication, Business, and Software Engineering to create an integrated curriculum. This program is designed to provide individuals with a bachelor's degree in computer science or business the opportunity to integrate their knowledge with advanced work in specific business process and systems. The program offers coursework in Salesforce and SAP that prepares individuals to pursue certification in these CRM and ERP software packages; the master's program will utilize this content and also offer advanced training as appropriate for those already initially certified.

Core Values/Learning Outcomes

- 1. Critical Inquiry
- 2. Applied Learning
- 3. Communication Skills
- 4. Diverse Perspectives
- 5. Leadership

The program's Core Values lay the broad foundation for the overall program design. Specific objectives are then addressed in each course, based on its curriculum. At the course level, the required projects and activities provide a rich and diverse collection of opportunities for assessment of student knowledge and understanding by the professor.
